I am a passionate and creative software developer with a strong foundation in computer science, and I hold a degree from the Instituto Politécnico de Beja. My experience spans both front-end and back-end development, having worked as a Web Developer at Redshift III Innovation, where I contributed to innovative software solutions.

Throughout my academic and professional career, I have engaged in diverse projects, including game development, data analysis, and web applications. My technical expertise includes programming languages such as C, PHP, and JavaScript and frameworks like RxJava and Angular. I am also experienced in database management and network security.

Beyond technical skills, I thrive in collaborative environments, enjoy problem-solving, and am always eager to learn new technologies. My adaptability, strong communication skills, and ability to work in teams allow me to contribute effectively to any project.

Passionate about technology, arts, museums, MotoGP, Formula 1, and Formula Drift, I also work as a part-time content creator. I am always looking for new challenges and opportunities to apply my skills to impactful projects.
